

# FACE YOUR NEXT STEP

## *after medical weight loss*

If you're one of the millions of Americans who've taken GLP-1s to lose weight, you may also see changes in your face, including:

- Wrinkles
- Sagging skin
- Decreased facial volume

The HALO Study will test whether injectable Hyaluronic Acid fillers—which are commonly used in many areas of the face—can improve facial volume and skin quality following GLP-1 treatment.

### AM I ELIGIBLE FOR THE HALO STUDY?\*

22–65 years old

Experienced aesthetic changes in your face

Stable dose of GLP-1 treatment for 3 months

At your desired weight

\*These are not all the eligibility criteria for the HALO Study. A clinical investigator will determine your eligibility.

**Losing weight doesn't have to mean losing your youthful look.**

Contact us to learn more and enroll.
